### How scoring works in Skyjo

- At the end of each round, every player reveals their cards and adds up their values, from −2 to 12. A column of three identical cards is discarded and scores nothing.
- The player who revealed all their cards first ends the round. If they do not have strictly the lowest score of the round, their score is doubled, provided it is positive.
- The game ends after the round in which a player reaches 100 points or more. The lowest total wins.
